BIO

Kelly Bull is an ecological landscape designer, consultant, educator, and public speaker with over 20 years of horticultural experience and almost a decade of experience teaching and public speaking. She specializes in regenerating urban landscapes and is energized by finding ways to resourcefully connect people to the planet and to each other. She is the winner of the PINA 2023 Design Challenge for her residential urban food forest design in Colorado Springs, Colorado. Having lived all over the United States, she has a vast knowledge of plant species in many different climates and hardiness zones.

SCOPE

With a professional background in horticulture, permaculture, and design, plus seven years of teaching experience, Kelly specializes in regenerative landscapes and educating others on how to achieve them. She has an infectious love for plants, an endless fascination for soil, a relentless case of wanderlust, and enjoys systems thinking and creative problem-solving. Her ideal project is helping city dwellers create low-maintenance and beautiful landscapes that provide food, shade, wildlife support, and joy.

APPROACH

- Serve as a mediator between the land and the land steward, seeking a balance between the needs and wants from the people, and the carrying capacity of the land. A detailed questionnaire and client interview start the process, followed by a thorough site assessment of the assets and limitations of the land.
- Consulting all stakeholders and continually collecting feedback, the design process is collaborative and creative, while being guided by professional support and expertise.
- Customized training and educational presentations are offered to inspire other stakeholders in the overall vision of the project as well as confidence in the implementation of the design.
